

Custom-tailleord app for Mitsubishi CNC

available for desktop, tablet and smartphone without coding.

PRO-AppDesigner

PRO-AppDesigner main screen

PRO-AppDesigner is a Windows program and generates, through a graphic interface, apps that run on different operating systems: Android, iOS, Windows.

Integrated in [PRO-MMI](#), events such as program changes, item counter changes, user changes, error messages or any other information such as order number, program information and program comments can be automatically displayed in the app.

It is also possible to use CNC-specific values such as operation mode, operation status, register values...

All texts and values can be set and sorted as required using drag'n'drop.

This is controlled with the **PRO-MMI** scripting module. This means that any applications and information are also possible across devices for communication.

Install Demo App

The screenshot shows a web application interface titled 'idApp' in the browser window. The interface has a dark header bar with a 'Refresh' button and a menu icon. The main content is divided into three sections: 'MACHINE', 'PROJECT', and 'ALARM'. Each section contains several input fields and buttons.

MACHINE	
Type	Laser
LA-4892-SN	1000 W
TimeStamp	Message
20.05.2021 17:31:44	Change Program

PROJECT	
User	Program
Administrator	Part3.PRG
Order	Customer
A4711	Meier KG
Counter Global	Counter Local
542	0

ALARM	
Alarm Counter	Alarm Text
0	

Demo App

The demo app is a so-called PWA ([Progressive Web App](https://www.ib-d.de/ID-Internet/Apps/idApp2)). This can be installed on any device as follows:

- Open the following URL address in your browser: <https://www.ib-d.de/ID-Internet/Apps/idApp2>
- Open your browser's settings. Scroll down and tab **Add to Home screen**
- Confirm by tapping **Add**
